### Computer Equipment

IBM, Tandy and compatibles with at least 256K RAM

Two disk drives recommended

Supports monochrome graphics, CGA, and EGA systems

Dot matrix printer selected from the Printer setup

Unmodified version of DOS 2.0 or higher

---

## Booting Your System

- Boot system from Drive A with DOS 2.0 or higher.
  - At the A> remove DOS disk and place the IBM version of Looney Tunes™ Print Kit in Drive A.
  - Type LT and press Enter.
  - Turn your printer ON. If you have any problems see Trouble Shooting in your manual.
- 

## Printer Setup Instructions

- Be certain you choose the correct printer from the Printer Setup table.
  - After you select a printer, choose YES when asked if you want to test your choice. If your setup is correct, a one inch square will print.
  - If your printout has broken lines, an incorrect printer was selected. Check the Printer Setup list and try again.
- 

## Laser Printer

- Draft and Final modes will have the same quality of print (dark).
  - You must use the Draft mode for full size printouts. Be aware that only 10 inches of the page will print out. The bottom 1/2 inch will be lost. Keep this in mind when selecting borders and placing text.
  - You must use Final mode to create a reduced version of your design (1 to 4 ratio) which is perfect for business cards, etc.
  - You MUST press form feed to signal printer to print your design.
- 

## IBM Printer Setup

### If Your Printer Is:

Blue Chip M120/10  
Citizen MSP10/15/20/25  
Epson FX80/LX80/FX85
